

# Cowater Steam Generator

## **Description:**

Wagner Power Steamer™ is a self-contained steam generator used for thawing operations against any possible freeze-ups in Cowater's Flush Tank and Haul System®.

It may be used indoors for any possible Sewage Discharge Pipe freeze-ups from the toilet end or it may be used outside for a Sewage Holding Tank freeze-up. In that case the unit should be insulated against heat loss due to cold weather.

## **Operation:**

All warnings and instructions must be read carefully before operating the system. The steam hose is placed in the pipe in contact with the ice to be melted.

Feed more hose as the ice keeps melting and advances gradually. Fill the water container as necessary.

## **Specifications:**

Water Heater Element: 1500 Watts

Water Container : 1.25 Gallon

Steam Hose Length : 12'

The following data may be useful to make plans for using this unit:

It requires 143 BTUs to melt a pound of ice at 32° F.

It requires 1,075 BTUs to convert a pound of water at 32° F to steam at 212° F.

1.5KWH generates 5118 BTUs.
